Pro Full-Text Search in SQL Server 2008 Hilary Cotter 2009-01-29 Businesses today want actionable insights into their data—they want their data to reveal itself to them in a natural and user—friendly form. What could be more natural than human language? Natural—language search is at the center of a storm of ever—increasing web—driven demand for human–computer communication and information access. SQL Server 2008 provides the tools to take advantage of the features of its built—in enterprise—level natural—language search engine in the form of integrated full—text search (iFTS). iFTS uses text—aware relational queries to provide your users with fast access to content. Whether you want to set up an enterprise—wide Internet or intranet search engine or create less ambitious natural—language search applications, this book will teach you how to get the most out of SQL Server 2008 iFTS: Introducing powerful iFTS features in SQL Server, such as the FREETEXT and CONTAINS predicates, custom thesauruses, and stop lists Showing you how to optimize full—text query performance through features like full—text indexes and iFilters Providing examples that help you understand and apply the power of iFTS in your daily projects

Patent Failure James Bessen 2009-08-03 In recent years, business leaders, policymakers, and inventors have complained to the media and to Congress that today's patent system stifles innovation instead of fostering it. But like the infamous patent on the peanut butter and jelly sandwich, much of the cited evidence about the patent system is pure anecdote--making realistic policy formation difficult. Is the patent system fundamentally broken, or can it be fixed with a few modest reforms? Moving beyond rhetoric, Patent Failure provides the first authoritative and comprehensive look at the economic performance of patents in forty years. James Bessen and Michael Meurer ask whether patents work well as property rights, and, if not, what institutional and legal reforms are necessary to make the patent system more effective. Patent Failure presents a wide range of empirical evidence from history, law, and economics. The book's findings are stark and conclusive. While patents do provide incentives to invest in research, development, and commercialization, for most businesses today, patents fail to provide predictable property rights. Instead, they produce costly disputes and excessive litigation that outweigh positive incentives. Only in some sectors, such as the pharmaceutical industry, do patents act as advertised, with their benefits outweighing the related costs. By showing how the patent system has fallen short in providing predictable legal boundaries, Patent Failure serves as a call for change in institutions and laws. There are no simple solutions, but Bessen and Meurer's reform proposals need to be heard. The health and competitiveness of the nation's economy depend on it.

Homeland Cory Doctorow 2013-02-05 In Cory Doctorow's wildly successful Little Brother, young Marcus Yallow was arbitrarily detained and brutalized by the government in the wake of a terrorist attack on San Francisco—an experience that led him to become a leader of the whole movement of technologically clued-in teenagers, fighting back against the tyrannical security state. A few years later, California's economy collapses, but Marcus's hacktivist past lands him a job as webmaster for a crusading politician who promises reform. Soon his former nemesis Masha emerges from the political underground to gift him with a thumbdrive containing a Wikileaks-style cable-dump of hard evidence of corporate and governmental perfidy. It's incendiary stuff—and if Masha goes missing, Marcus is supposed to release it to the world. Then Marcus sees Masha being kidnapped by the same government agents who detained and tortured Marcus years earlier. Marcus can leak the archive Masha gave him—but he can't admit to being the leaker, because that will cost his employer the election. He's surrounded by friends who remember what he did a few years ago and regard him as a hacker hero. He can't even attend a demonstration without being dragged onstage and handed a mike. He's not at all sure that just dumping the archive onto the Internet, before he's gone through its millions of words, is the right thing to do. Meanwhile, people are beginning to shadow him, people who look like they're used to inflicting pain until they get the answers they want. Fast-moving, passionate, and as current as next week, Homeland is every bit the equal of Little Brother—a paean to activism, to courage, to the drive to make the world a better place. Improving Safety at Small Underground Mines 1994

Glencoe Earth iScience, Grade 6, Student Edition McGraw-Hill Education 2007-04-09 With a broad array of innovative print and technology resources, Glencoe Earth Science helps teachers differentiate and accommodate all learners. The range of labs, content area reading, discussion strategies, note-taking tools, and activities provides teachers with multiple experiences of each Science Benchmark. They give teachers flexibility and the ability to monitor student progress through ongoing assessment.

Good Omens Neil Gaiman 2006-02-28 There is a distinct hint of Armageddon in the air. According to The Nice and Accurate Prophecies of Agnes Nutter, Witch (recorded, thankfully, in 1655, before she blew up her entire village and all its inhabitants, who had gathered to watch her burn), the world will end on a Saturday. Next Saturday, in fact. So the armies of Good and Evil are amassing, the Four Bikers of the Apocalypse are revving up their mighty hogs and hitting the road, and the world's last two remaining witch-finders are getting ready to fight the good fight, armed with awkwardly antiquated instructions and stick pins. Atlantis is rising, frogs are falling, tempers are flaring. . . . Right. Everything appears to be going according to Divine Plan. Except that a somewhat fussy angel and a fast-living demon -- each of whom has lived among Earth's mortals for many millennia and has grown rather fond of the lifestyle -- are not particularly looking forward to the coming Rapture. If Crowley and Aziraphale are going to stop it from happening, they've got to find and kill the Antichrist (which is a shame, as he's a really nice kid). There's just one glitch: someone seems to have misplaced him. . . . First published in 1990, Neil Gaiman and Terry Pratchett's brilliantly dark and screamingly funny take on humankind's final judgment is back -- and just in time -- in a new hardcover edition (which includes an introduction by the authors, comments by each about the other, and answers to some still-burning questions about their wildly popular collaborative effort) that the devout and the damned alike will surely cherish until the end of all things.

Operations Management S. Anil Kumar 2009-01-01 About the Book: This book presents lucid treatment of a wide range of issues involved in Operations Management. It emphasises on the analysis and quantitative techniques for the overall role of Operations Management in organisations, which aim at maximis

Visual Ergonomics Handbook Jeffrey Anshel 2005-06-22 Viewing an electronic display screen varies significantly from reading text on paper and human eyes often suffer for it. Featuring cutting-edge research in the field of visual ergonomics, Visual Ergonomics Handbook focuses on vision and eye-care issues in both the office and industrial setting, including eye safety issues in industrial plants and construction sites. The text integrates the knowledge of leading experts in the fields of optometry, ergonomics, eye safety, and occupational medicine into a comprehensive, easy-to-read volume that also analyzes the economic benefits of developing a workplace visual ergonomics program. Written at a level that makes the information easily accessible, the chapter authors provide a simplified but thorough discussion of the process of eyesight and the components of the visual system. They explore the technology behind computer displays, discuss environmental issues surrounding eye symptoms and vision in the workplace, and examine lighting, glare, monitor position, vision distances, and other issues in detail. The chapter on glare in the workplace clarifies the role of anti-glare filters for display and the chapter on eye examinations covers the information that is critical to describe to the doctor. A discussion of the economic impact of ergonomic programs wraps up the main volume of the book. The book's multidisciplinary chapter authors give you wide ranging coverage of the issues and the editorial guidance of Jeffrey Anshel ensures that redundancies are weeded out. The first comprehensive handbook on visual ergonomics, it presents information that is adequately straightforward and technical.

Technological Slavery (Large Print 16pt) Theodore J. Kaczynski 2011-02 Theodore Kaczynski saw violent collapse as the only way to bring down the techno-industrial system, and in more than a decade of mail bomb terror he killed three people and injured 23 others. One does not need to support the actions that landed Kaczynski in supermax prison to see the value of his essays disabusing the notion of heroic technology while revealing the manner in which it is destroying the planet. For the first time, readers will have an uncensored personal account of his anti-technology philosophy, including a corrected version of the notorious ''Unabomber Manifesto,''Kaczynski, s critique of anarcho-primitivism, and essays regarding ''the Coming Revolution.''

Deadlands Reloaded Pinnacle Entertainment 2010-10-04 "The Marshal's Handbook is the setting book for Deadlands Reloaded." -- From back cover

Technological and Institutional Innovations for Marginalized Smallholders in Agricultural Development Franz W. Gatzweiler 2016-02-19 The aim of the book is to present contributions in theory, policy and practice to the science and policy of sustainable intensification by means of technological and institutional innovations in agriculture. The research insights re from Sub-Saharan Africa and South Asia. The purpose of this book is to be a reference for students, scholars and practitioners inthe field of science and policy for understanding and identifying agricultural productivity growth potentials in marginalized areas.

Invisible Sun Charles Stross 2021-09-28 The alternate timelines of Charles Stross' Empire Games trilogy have never been so entangled than in Invisible Sun—the techno-thriller follow up to Dark State—as stakes escalate in a conflict that could spell extermination for humanity across all known timelines. An inter-timeline coup d'état gone awry. A renegade British monarch on the run through the streets of Berlin. And robotic alien invaders from a distant timeline flood through a wormhole, wreaking havoc in the USA. Can disgraced worldwalker Rita and her intertemporal extraordaire agent of a mother neutralize the livewire contention before it's too late? At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The Food Safety Information Handbook Cynthia A. Roberts 2001 Outbreaks of E. Coli and Salmonella from eating tainted meat or chicken and Mad Cow Disease have consumers and the media focused on food safety-related topics. This handbook aimed at students as well as consumers is an excellent starting point for locating both print and electronic resources with timely information about food safety issues, organizations and associations, and careers in the field.

Digital Rubbish Jennifer Gabrys 2013-04-29 This is a study of the material life of information and its devices; of electronic waste in its physical and electronic incarnations; a cultural and material mapping of the spaces where electronics in the form of both hardware and information accumulate, break down, or are stowed away. Where other studies have addressed "digital" technology through a focus on its immateriality or virtual qualities, Gabrys traces the material, spatial, cultural and political infrastructures that enable the emergence and dissolution of these technologies. In the course of her book, she explores five interrelated "spaces" where electronics fall apart: from Silicon Valley to Nasdaq, from containers bound for China to museums and archives that preserve obsolete electronics as cultural artifacts, to the landfill as material repository. Digital Rubbish: A Natural History of Electronics describes the materiality of electronics from a unique perspective, examining the multiple forms of waste that electronics create as evidence of the resources, labor, and imaginaries that are bundled into these machines. Ranging across studies of media and technology, as well as environments, geography, and design, Jennifer Gabrys draws together the far-reaching material and cultural processes that enable the making and breaking of these technologies.

Writer's Digest Flip Dictionary Barbara Kipfer 2000-11 Provides terms for common phrases, concepts, and definitions, and includes related terms and synonyms.

Who Asked the First Question I. M. Zhordania 2006

The Civil Contract of Photography Ariella Azoulay 2021-09-14 In this groundbreaking work, Ariella Azoulay thoroughly revises our understanding of the ethical status of photography. It must, she insists, be understood in its inseparability from the many catastrophes of recent history. She argues that photography is a particular set of relations between individuals and the powers that govern them and, at the same time, a form of relations among equals that constrains that power. Anyone, even a stateless person, who addresses others through photographs or occupies the position of a photograph's addressee, is or can become a member of the citizenry of photography. The crucial arguments of the book concern two groups that have been rendered invisible by their state of exception: the Palestinian noncitizens of Israel and women in Western societies. Azoulay's leading question is: Under what legal, political, or cultural conditions does it become possible to see and show disaster that befalls those with flawed citizenship in a state of exception? The Civil Contract of Photography is an essential work for anyone seeking to understand the disasters of recent history and the consequences of how they and their victims are represented.

The Design and Engineering of Curiosity Emily Lakdawalla 2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.

Blue Urbanism Timothy Beatley 2014-07-08 What would it mean to live in cities designed to foster feelings of connectedness to the ocean? As coastal cities begin planning for climate change and rising sea levels, author Timothy Beatley sees opportunities for rethinking the relationship between urban development and the ocean. Modern society is more dependent upon ocean resources than people are commonly aware of—from oil and gas extraction to wind energy, to the vast amounts of fish harvested globally, to medicinal compounds derived from sea creatures, and more. In Blue Urbanism, Beatley argues that, given all we've gained from the sea, city policies, plans, and daily urban life should acknowledge and support a healthy ocean environment. The book explores issues ranging from urban design and land use, to resource extraction and renewable energy, to educating urbanites about the wonders of marine life. Beatley looks at how emerging practices like "community supported fisheries" and aquaponics can provide a sustainable alternative to industrial fishing practices. Other chapters delve into incentives for increasing use of wind and tidal energy as renewable options to oil and gas extraction that damages ocean life, and how the shipping industry is becoming more "green." Additionally, urban citizens, he explains, have many opportunities to interact meaningfully with the ocean, from beach cleanups to helping scientists gather data. While no one city "has it all figured out," Beatley finds evidence of a changing ethic in cities around the world: a marine biodiversity census in Singapore, decreasing support for shark-finning in Hong Kong, "water plazas" in Rotterdam, a new protected area along the rocky shore of Wellington, New Zealand, "bluebelt" planning in Staten Island, and more. Ultimately he explains we must create a culture of "ocean literacy" using a variety of approaches, from building design and art installations that draw inspiration from marine forms, to encouraging citizen volunteerism related to oceans, to city-sponsored research, and support for new laws that protect marine health. Equal parts inspiration and practical advice for urban planners, ocean activists, and policymakers, Blue Urbanism offers a comprehensive look at the challenges and great potential for urban areas to integrate ocean health into their policy and planning goals.

How to Read Donald Duck Ariel Dorfman 1984

Webster's New World Essential Vocabulary David Alan Herzog 2004-12-17 EXPAND YOUR VOCABULARY--FOR BETTER TEST SCORES AND BETTER COMMUNICATION You probably can't learn all the hundreds of thousands of words in the English language--but you can learn those difficult words you're most likely to need to know. If you want to increase your vocabulary for standardized tests or just better communication, Webster's New World Essential Vocabulary is the only tool you need. It presents essential words with definitions, example sentences, synonyms, and tense forms. In addition to the most frequently tested terms from the SAT and GRE tests, Webster's New World Essential Vocabulary also includes helpful appendices on foreign phrases, prefixes, and suffixes. Together, these 1,500 words and definitions not only prepare you for tough tests, but also dramatically improve your communication skills for the business world or studying English as a second language. Whether you're worried about college entrance exams or just want to be better with words, this practical, helpful resource gives you the tools you need to read, speak, and write more persuasively, and communicate more effectively. Plus, Handy self-tests let you gauge your understanding of words and meaning, so you can measure your progress as you go!

The Carbon Cycle T. M. L. Wigley 2000-05-08 Leading scientists describe how we can reduce CO2 emissions; for graduate students and researchers.

Concepts of Biology Samantha Fowler 2017-12-30 The images in this textbook are in color. There is a less-expensive non-color version available - search for ISBN 9781680922202. Concepts of Biology is designed for the introductory biology course for nonmajors taught at most two- and four-year colleges. The scope, sequence, and level of the program are designed to match typical course syllabi in the market. Concepts of Biology includes interesting applications, features a rich art program, and conveys the major themes of biology.

CUCKOO'S EGG Clifford Stoll 2012-05-23 Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping" (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

Applications and Investigations in Earth Science Dennis G. Tasa 2011-11-21 This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Perfect for use with any Earth Science text, this versatile collection of introductory-level laboratory experiences examines the basic principles and concepts of the Earth sciences. Widely praised for its concise coverage and dynamic illustrations by Dennis Tasa, the text contains twenty-three step-by-step exercises that reinforce major topics in geology, oceanography, meteorology, and astronomy. The Seventh Edition offers over 80 new photos, redrawn illustrations, and safety "Caution" boxes throughout.

The Illusions of Entrepreneurship Scott A. Shane 2008-10-01 There are far more entrepreneurs than most people realize. But the failure rate of new businesses is disappointingly high, and the economic impact of most of them disappointingly low, suggesting that enthusiastic would-be entrepreneurs and their investors all too often operate under a false set of assumptions. This book shows that the reality of entrepreneurship is decidedly different from the myths that have come to surround it. Scott Shane, a leading expert in entrepreneurial activity in the United States and other countries, draws on the data from extensive research to provide accurate, useful information about who becomes an entrepreneur and why, how businesses are started, which factors lead to success, and which predict a likely failure. The Illusions of Entrepreneurship is an essential resource for everyone who has dreamed of starting a new business, for investors in start-ups, for policy makers attempting to facilitate the formation and survival of new businesses, and for researchers interested in the economic impact of entrepreneurial activity. Scott Shane offers research-based answers to these questions and many others: · Why do people start businesses? · What industries are popular for start-ups? · How many jobs do new businesses create? · How do entrepreneurs finance their start-ups? · What makes some locations and some countries more entrepreneurial than others? · What are the characteristics of the typical entrepreneur? · How well does the typical start-up perform? · What strategies contribute to the survival and profitability of new businesses over time?

Genetically Engineered Crops National Academies of Sciences, Engineering, and Medicine 2017-01-28 Genetically engineered (GE) crops were first introduced commercially in the 1990s. After two decades of production, some groups and individuals remain critical of the technology based on their concerns about possible adverse effects on human health, the environment, and ethical considerations. At the same time, others are concerned that the technology is not reaching its potential to improve human health and the environment because of stringent regulations and reduced public funding to develop products offering more benefits to society. While the debate about these and other questions related to the genetic engineering techniques of the first 20 years goes on, emerging genetic-engineering technologies are adding new complexities to the conversation. Genetically Engineered Crops builds on previous related Academies reports published between 1987 and 2010 by undertaking a retrospective examination of the purported positive and adverse effects of GE crops and to anticipate what emerging genetic-engineering technologies hold for the future. This report indicates where there are uncertainties about the economic, agronomic, health, safety, or other impacts of GE crops and food, and makes recommendations to fill gaps in safety assessments, increase regulatory clarity, and improve innovations in and access to GE technology.

Introduction to Permaculture Bill Mollison 1991 Topics in this book include: Energy-efficient site analysis, planning & design methods. House placement & design for temperate, dryland & tropical regions. Urban permaculture: garden layouts, land access & community funding systems. Using fences, trellis, greenhouse & shadehouse to best effect. Chicken & pig forage systems; tree crops & pasture integration for stock. Orchards & home woodlots for temperate, arid & tropical climates. How to influence microclimate around the house & garden. Large section on selected plant species lists, with climatic tolerances, heights & uses.

Instructor's Manual to Accompany Contemporary Canadian Business Law : Principles and Cases John A. Willes 1982

I Am a Strange Loop Douglas R. Hofstadter 2007-03-27 An original, endlessly thought-provoking, and controversial look at the nature of consciousness and identity argues that the key to understanding selves and consciousness is the "strange loop," a special kind of abstract feedback loop inhabiting our brains.

Earth's Features Inc World Book 2016-06-01 How much of the world's water is found in the oceans? How many volcanoes erupt each year? How was the Grand Canyon formed? Read this book to find out! Part of World Book's Learning Ladders series, this book tells children about different kinds of landforms and how they shape Earth. Children also learn about bodies of water and their importance to people. Each spread includes introductory text, colorful illustrations with detailed captions, and photographs that show real-world examples of the featured topic. Puzzle pages, fun facts, and true/false quizzes appear at the end of each volume.

Wandering Significance Mark Wilson 2008 Mark Wilson presents a highly original and broad-ranging investigation of the way we get to grips with the world conceptually, and the way that philosophical problems commonly arise from this. Words such as color, shape, solidity exemplify the commonplace conceptual tools we employ to describe and order the world around us. But the world's goods are complex in their behaviors and we often overlook the subtle adjustments that our evaluative terms undergo as their usage becomes gradually adapted to different forms of supportive circumstance. Wilson not only explains how these surprising strategies of hidden management operate, but also tells the astonishing story of how faulty schemes and great metaphysical systems sometimes spring from a simple failure to recognize the innocent wanderings to which our descriptive words are heir. Wilson combines traditional philosophical concerns about human conceptual thinking with illuminating data derived from a large variety of fields including physics and applied mathematics, cognitive psychology, and linguistics. Wandering Significance offers abundant new insights and perspectives for philosophers of language, mind, and science, and will also reward the interest of psychologists, linguists, and anyone curious about the mysterious ways in which useful language obtains its practical applicability.

Philosophy of Technology Val Dusek 2006-03-13 Ideal for undergraduate students in philosophy and science studies,Philosophy of Technology offers an engaging andcomprehensive overview of a subject vital to our time. An up-to-date, accessible overview of the philosophy oftechnology, defining technology and its characteristics. Explores the issues that arise as technology becomes anintegral part of our society. In addition to traditional topics in science and technologystudies, the volume offers discussion of technocracy, the romanticrebellion against technology. Complements The Philosophy of Technology: The TechnologicalCondition: An Anthology, edited by Robert C. Scharff and ValDusek (Blackwell, 2003).

Information Needs of Communities Steven Waldman 2011-09 In 2009, a bipartisan Knight Commission found that while the broadband age is enabling an info. and commun. renaissance, local communities in particular are being unevenly served with critical info. about local issues. Soon after the Knight Commission delivered its findings, the FCC initiated a working group to identify crosscurrent and trend, and make recommendations on how the info. needs of communities can be met in a broadband world. This report by the FCC Working Group on the Info. Needs of Communities addresses the rapidly changing media landscape in a broadband age. Contents: Media Landscape; The Policy and Regulatory Landscape; Recommendations. Charts and tables. This is a print on demand report.
