Atmosphere, Ocean and Climate Dynamics John Marshall 2007-12-19 For advanced undergraduate and beginning graduate students in atmospheric, oceanic, and climate science, Atmosphere, Ocean and Climate Dynamics is an introductory textbook on the circulations of the atmosphere and ocean and their interaction, with an emphasis on global scales. It will give students a good grasp of what the atmosphere and oceans look like on the large-scale and why they look that way. The role of the oceans in climate and paleoclimate is also discussed. The combination of observations, theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography. * Written at a mathematical level that is appealing for undergraduates and beginning graduate students * Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web * Contains instructions on how to reproduce the simple but informative laboratory experiments * Includes copious problems (with sample answers) to help students learn the material.

Violence and Mental Health Jutta Lindert 2015-02-25 Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its

outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

Principles of Asynchronous Circuit Design Jens Sparsø 2013-04-17 Principles of Asynchronous Circuit Design - A Systems Perspective addresses the need for an introductory text on asynchronous circuit design. Part I is an 8-chapter tutorial which addresses the most important issues for the beginner, including how to think about asynchronous systems. Part II is a 4-chapter introduction to Balsa, a freely-available synthesis system for asynchronous circuits which will enable the reader to get hands-on experience of designing high-level asynchronous systems. Part III offers a number of examples of state-of-the-art asynchronous systems to illustrate what can be built using asynchronous techniques. The examples range from a complete commercial smart card chip to complex microprocessors. The objective in writing this book has been to enable industrial designers with a background in conventional (clocked) design to be able to understand asynchronous design sufficiently to assess what it has to offer and whether it might be advantageous in their next design task.

Graphics Shaders Mike Bailey 2012-05-22 Programmable graphics shaders, programs that can be downloaded to a graphics processor (GPU) to carry out operations outside the fixed-function pipeline of earlier standards, have become a key feature of computer graphics. This book is designed to open computer graphics shader programming to the student, whether in a traditional class or on their own. It is intended to complement texts based on fixed-function graphics APIs, specifically OpenGL. It introduces shader programming in general, and specifically the GLSL shader language. It also introduces a flexible, easy-to-use tool, glman, that helps you develop, test, and tune shaders outside an application that would use them.

Stolen Treasure Lachman Mehta 2012-10-31 Stolen Treasure is a book almost 70 years in the writing! Written over the decades since 1946, this collection of observations, quotes, proverbs, witticisms and rules for living have guided the author since his youth growing up in India, through his time in the Indian Navy, and for the bulk of his life since moving to Ireland in 1960. Now in his mid-80s, the author presents a lifetime of humour and words of wisdom for a happy life in this book. A true treasure collection of one-line gems and snip-bits of life s experiences, the book presents an insight into the observations of life over the author s lifetime that so many of us experience but never document. At first, observations from an idealistic young man are presented. This is followed by wisdom learned in early adulthood and gathered as an Officer with the Indian Navy. The observations continue from a happy lifetime in Ireland with a large focus on what the author learned about life as a husband and father, as well as engineer and lecturer, to retiree. These have been collected over the years as the author has experienced them in life or overheard them in social occasions, and carefully recorded by hand. In the decades before the internet and social media, these were the original status updates that tell a story of how life and perception of what matters has changed over almost 70 years. An intriguing read for every person of all ages and all interests.

Explorations in Applied Geography ASHOK K. DUTT 2008-02-21 Applied geography, a new frontier in geographic discipline, distinguishes itself from other branches of geography through the application of geographical knowledge and its techniques in solving practical problems of the land and the environment. Explorations in Applied Geography is a felicitation volume in honour of Professor L.R. Singh, Department of Geography, University of Allahabad, who has established his international credentials as a leading exponent of Applied Geography. He considers public policy to be one of the applications of applied geographic principles, since many problems facing society today have a geographical dimension. To Professor L.R. Singh, Applied Geography is the strategy of the trinity of men, space and resources which need to be harmonized in advancing human well-being. This volume, contributed by geographers of eminence within the country and from other parts of the globe, focuses on the

following thrust areas: • Natural and environmental hazards • Environmental change and management • Challenges of the human environment • Application of techniques of spatial analysis In a nutshell, the book emphasizes the important proactive role that the Applied Geography must play in the formulation of public policies and programmes for sustainable human development. This comprehensive and classic compendium will not only be useful to post-graduate students in geography but also provide new vistas in geographic research.

Dalit Households in Village Economies V. K. Ramachandran 2014 Caste is an institution of oppression and social discrimination specific to South Asia, more so to India. Central to the caste system were the status assigned to the Dalit people and the criminal practice of untouchability. Caste is embedded in production relations. It is an impediment to the growth of the productive forces, and a bulwark against the revolutionary overthrow of the ruling classes. Although there have been, in recent years, new scholarship and new attempts to understand the socio-economic conditions of life of Dalit people and households in India, it is still true, as a leading scholar in the field has written, that 'very few empirical studies have tried to study the phenomenon of economic discrimination'. This book is an attempt to contribute to the study and understanding of economic deprivation and exclusion among Dalits in rural India. The first section deals with poverty and group discrimination. The second section has case studies - from Kerala, Tamil Nadu and West Bengal - on historical aspects of land, caste and social exclusion. The third section deals with contemporary fieldwork-based economic analyses from Tamil Nadu and Maharashtra. The last section has studies of Dalit households in village economies; the empirical base for these studies comes from the village-level data archive of the Project on Agrarian Relations (PARI) being conducted by the Foundation for Agrarian Studies.The articles in the book are evidence, in some cases, of direct discrimination, and in others of what has been described as differential impact discrimination. Most of all, they reflect cumulative discrimination and disadvantage.

Fading Shadows Leslie Walter LeRoy 1973 The mountain region of Western Colorado in 1860, was disturbed from deep slumber with the rediscovery of rich deposits of gold and silver. Mining towns and camps of every size and description were born in the valleys and on the slopes. Prospectors of diversified background searched for precious metals in veins and in stream gravels. Hopes and fortunes were won and lost; living conditions were severe and uncertain. Disease, hunger, accidents, and inadequate medical care promoted cemetery growth. Today, scattered throughout the mountains, are many fascinating relics (ghosts) of these early times--collapsed log cabins, headframes, cable-tram towers, foundations of homes and mills, rusted equipment, abandoned wagon trails and railroad grades, ocherous mine dumps, tunnels, and mill trailings. These relics are rapidly fading into oblivion because of vandalism, fire, snowslides, floods, and normal progressive decay. The next 100 years will claim all except those preserved in museums. To place on photographic record as of 1974 some of these relics, is the objective of Fading Shadows. --from the book jacket.
